## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 12 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

#### Claim 12:

- Claim 12 introduces a new limitation "a second comparator", which lets one to expect an earlier recitation of a "first" comparator, which is not found in the base claim. Moreover, the limitation "said measuring unit" at line 5 lacks antecedent basis. However, it is believed that a new claim including all the limitations similar to those recited in claim 4 should be added to render claim 12 definite.

#### Claim 13:

- The following limitation "said delay signal generator" lacks antecedent basis. Moreover, by claiming dependency from claim 1, claim 13 becomes a duplicate of claim 4, which recites the exact limitation elements. However, it is believed that claim 13 improperly claims dependency from claim 1, which recites the above limitation in the form of "means". Claim 13 should be amended to claim dependency from claim 11 instead.

Appropriate correction is required.

***Allowable Subject Matter***

3. Claims 1-11 and 14-15 are allowed.
4. Claims 12 and 13 would be allowable if rewritten to overcome the rejections under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
5. The following is an examiner's statement of reasons for allowance: the primary reason for the indication of the allowability of the claimed invention is the inclusion of the limitations, in the combination as currently claimed, that the claimed exposure recording apparatus includes a light beam deflector for deflecting the light beam a small distance in a direction different from the main scanning direction based on a switching signal, a delay signal generator, which generates a delay signal delayed from the switching signal by a predetermined time depending on the time required for the light beam deflector to deflect the light beam, a light beam modulator, which modulates the light beam with image information according to the delay signal, wherein the light beam is deflected the small distance in the direction different from the main scanning direction to generate a plurality of main scanning lines on the image recording material to record a two-dimensional image. The combined limitations are not found taught or fairly suggested by the prior arts made of record, considered alone or in combination.
